SMART GRID & HOME

Overview

Encompasses load and generation and acts as a single controllable entity with respect to the grid. Additional resources pertaining to microgrid development, as well as alternate uses of 40101(d) grid resilience formula grants. Coalition stakeholders include the City of Oakridge, South Willamette Solutions, Lane County, Oakridge Westfir Area Chamber of Commerce, Good Company/Parametrix, Oakridge Trails. Microgrids are localized grids that can disconnect from the traditional grid to operate autonomously. Because they are able to operate while the main grid is down, microgrids can strengthen grid resilience and help mitigate grid disturbances as well as function as a grid resource for faster system. The MSWG aimed to bring together NARUC and NASEO members to explore the capabilities, costs, and benefits of microgrids; discuss barriers to microgrid development; and develop strategies to plan, finance, and deploy microgrids to improve resilience. How Microgrids Can Improve Resiliency oHelp grid maintain balance oCan assist during instability events; help prevent.
