

# Utility Model Patent for Energy Storage System

## Overview

---

A potential energy storage system incorporating multiple track mounted shuttle units having motor/generator drive bogies and structure with an integral transfer mechanism for removably carrying energy storage masses from a first lower elevation storage yard to a second. A potential energy storage system incorporating multiple track mounted shuttle units having motor/generator drive bogies and structure with an integral transfer mechanism for removably carrying energy storage masses from a first lower elevation storage yard to a second. An energy storage system includes a module housing and multiple battery cells with insulating material and discharge directing material positioned inside the module housing. Each of the battery cells has a first end and a second end. In some cases, such systems receive electrical energy from renewable energy sources such as solar or wind. Using novel techniques, the heat energy. An energy storage system of the present disclosure includes: a first battery module in which a plurality of battery cells are disposed; a second battery module in which a plurality of battery cells are disposed, and which is disposed to face the first battery module; a module screw which extends in. Similar to patents, utility models protect new technical inventions through granting a limited exclusive right to prevent others from commercially exploiting the protected inventions without consents of the right holders. In order to obtain protection, an application must be filed, and a utility. According to the International Energy Agency (IEA), the solar storage market will grow by 200% by 2030. Let's break down their unique advantages: Modular Design: Scale capacity from 5kW to 10MW without redesign. Thermal energy storage (TES) is achieved with widely differing technologies. Depending on the specific technology, it allows excess thermal energy to be stored.

## Utility Model Patent for Energy Storage System

---

### BATTERY STORAGE SYSTEM WITH INTEGRATED INVERTER

Although functioning as one system, the battery energy storage system and the inverter are conventionally disposed at different locations and interconnected with cables.

## ENERGY STORAGE SYSTEM

The energy storage system of claim 18, wherein a height at which the pair of side brackets protrude downward from the first battery module or the second battery module is formed to be longer than a ...

[Get Price](#)

## Utility scale electric energy storage system

The embodiments disclosed herein provide a highly efficient, utility scale energy storage system. Large masses

are transported uphill to store energy and downhill to release it.
