

Wall-mounted solar panel power generation system

Overview

The wall-mounted solar panels use highly efficient monocrystalline modules and thus generate the maximum possible amount of power from a limited area. You can then use your stored energy to power the devices and appliances in your home day and night, during outages or when you want to go off-grid. With suitable mounting kits, you can safely install solar panels ranging from 400W to 660W on building facades.
