

# What are the two major types of solar power generation

## Overview

---

The two primary types of solar energy are photovoltaic (PV) and solar thermal systems. Photovoltaic systems convert sunlight directly into electricity using solar cells, while solar thermal systems harness sunlight to generate heat or electricity. Photovoltaic panels can power electrical devices, while solar thermal collectors can heat homes or hot water. Large units, "solar power plants", whether photovoltaic or thermodynamic or thermic, deployed over hundreds of hectares, produce electricity and heat on a large scale that can be fed into the grid. Below, you can find resources and information on the basics of solar radiation, photovoltaic and concentrating solar-thermal power technologies, electrical grid systems integration, and the non-hardware aspects (soft costs) of solar energy. Let's explore these mechanisms, delve into solar's broad range of applications, and examine how they work. There are several types of solar energy technologies, each with its unique applications and benefits.

## What are the two major types of solar power generation

---

### Types of Solar Energy Systems

Photovoltaic (PV) and Concentrated Solar Power (CSP) systems are the two primary types of solar energy systems. PV systems, popular for domestic use, convert sunlight directly into electricity using ...
