

# What is the inside of a photovoltaic panel like

## Overview

---

At the heart are photovoltaic (PV) cells that convert sunlight into electricity, supported by protective and structural layers that ensure it's delivered safely and reliably. Most panels include solar cells, tempered glass, encapsulant, a backsheet, a metal frame, an inverter. What does a solar panel look like inside?

Understanding the internal structure of a solar panel involves fascination and complexity. Here's a breakdown of what you'll find inside: Photovoltaic Cells: The heart of the solar panel, these cells are typically made from silicon. Each component plays a distinct role in optical protection, electrical energy conversion, mechanical support, and electrical connection. — Stephanie Chasteen and Rima Chaddha 1.
