

# Wind power generation site selection

## Overview

---

This process of selecting a location for a wind energy project, known as “siting,” includes reviewing wind maps and data, securing permits and following ordinances, and ensuring best practices for the size and proposed location of a project. This process of selecting a location for a wind energy project. The process of site selection is complex and involves a multitude of factors that can significantly impact the viability and success of a wind energy project. Site selection is the foundation upon which the entire wind energy project is built. In this comprehensive article, we explore the essential methodologies, strategies. Wind energy potential varies drastically by location; choosing the right site can make or break a project's success. 748 GW to 976 GW depending on hub height, yet only ~47 GW installed as of 2025. This article will go through the steps you must take to choose a great place for.
