

# Wind power storage peak shaving

## Overview

---

Peak shaving is a critical strategy in managing energy demand, particularly during peak hours when energy consumption surges. In order to improve the wind power consumption capacity of the power grid system and reduce the operating costs of the power grid, a hierarchical optimization strategy is proposed to integrate high-energy consumption loads as peak shaving resources into the power grid dispatch system. The importance of peak shaving lies in its ability to alleviate. This paper presents a solution for energy storage system capacity configuration and renewable energy integration in smart grids using a multi-disciplinary optimization method. But generator's output become more unstable, periodical fluctuation of power carry out much more fatigue injury, which reduced the. Peak shaving enables peak savings. Energy and facility man-agers will gain valuable.
