

Yemen s telecommunications base station to build solar power plants

Overview

The Shabwah plant features 85,644 solar panels, six transformer stations, a 15 MWh battery energy storage system to stabilize power supply during peak demand, and a 15-kilometer transmission line linking the plant to Yemen's national grid. Yemen, widely regarded as the Middle East's least electrified nation, is now benefiting from its first large-scale solar plant, which is helping restore power to tens of thousands of households in Aden. The Aden Solar Power Plant, a 120-megawatt facility funded by the United Arab Emirates, began. LONGi, a leading solar technology company, and IES, a prominent engineering, procurement, and construction firm, have completed a 6.5 MW solar power project in Yemen. Fully commissioned in December, this groundbreaking development is the first to connect to Yemen's national grid—a significant. Yemen's first large-scale solar power facility, the Aden Solar Power Plant, is representing a significant addition to the country's electricity generation capacity. Funded by the UAE and operational since July 2024, it serves 150,000-170,000 homes daily. This marks a strategic move towards renewables as Yemen plans to double its solar.
